Visa's Cardholder Information Security Program (CISP) has been mandated by Visa since June 2001, and is intended to protect Visa cardholder data. To achieve CISP compliance, all members, merchants and service providers must adhere to the Payment Card Industry (PCI) Data Security Standard, which offers a single approach to safeguarding sensitive data for all card brands. Failure to comply can mean revocation of VISA privileges and or up to \$500,000 in fines — per incident.

OUR APPROACH TO VISA CISP CERTIFICATION

CISP compliance validation identifies and corrects vulnerabilities by ensuring appropriate levels of cardholder data security are maintained. As a (QDSC) **Qualified Data Security Company**, T3i is one of the few security and compliance firms certified by Visa USA, Inc to perform onsite PCI Data Security Assessments.

Our CISP Certification engagement focuses on assessment, remediation, certification and quarterly scans of our client's information and network security. T3i's approach aligns your organizations individual business units with their technology needs according to the PCI Security Audit and Reporting Procedures.
